where we are going, and this book will help you to enlighten
enlighten you. How many times do we ask ourselves why things
happen to us? How many times do we repeat and repeat the same
events in our lives? How many times do we have the feeling that
there is something more than what we see? We question our lives
and raise so many because... If you've asked yourself these
questions, this book has the answers. The world is not all we see
or perceive, there is more. And among all that more are the
universal laws. When we think of laws our mind goes to the laws
created by man, the civil, criminal, economic laws, etc. The laws
that we know since we are born and with which we live and
develop in society. But above these human laws are the universal
laws that have always existed. It is time for universal laws to be
known and learned. The sooner we learn these laws and how they
work, the sooner we will understand the why of many things in
our lives. Thank you Marco Antonio Navarro Tena (my beloved
life partner) for listening to your call. Thank you for putting your
service of all, your extensive studies and knowledge about universal
laws in this very accessible manual. Thank you for lighting the path.
Dear reader, I wish you that with the understanding of the universal laws
your path will be easier and happier. With all my Love and Love

The family is now restricted to the subgenus *Terebra* (auger-shells), including about 170 living species; the genus *Pusionella*, formerly referred to Terebridae, being included in the Pleurotomidae. Troschel, however (*Gebiss der Schnecken*, ii, 28), found so much difference in the mouth-parts of the few species of Terebridae examined by him, that he would have separated them into three families, notwithstanding their relationship of their shells, had he not been deterred by the paucity of material for study. His three types are as follows: 1. The mouth-mass at the end of the proboscis furnished with side-teeth, as in *Conus*, and a poison-gland. *Hastula caerulea*. 2. No teeth, no venom-gland. *Acus muscaria*. 3. The mouth-mass contains a true radula, supported by a lingual cartilage, with two rows of side-teeth; no venom-gland. *Myurella duplicata*. Pl. 12, fig. 40. Finally in examining a specimen of *T. subulata* (representative of the restricted group *Terebra*), Troschel obtained negative results; seeing no teeth, although the poison-gland was present.
